About LEMA Network

LEMA Network was founded in 2007 by young Afghan entrepreneurs in Kabul, Afghanistan. The original idea of the company was to develop computer systems that can revolutionize the IT industry in Afghanistan. Therefore, amazing work for our clients is the forefront. Revolutionizing the IT industry in Afghanistan is our long term goal and through the years we have developed plausible background.

Whether we are developing a brand new system or fixing the bolts of an existing one, we deliver!

Our team consist of highly educated personnel with years of professional experience who want to explore the boundaries of technologies. We develop differently, we want to make software development revolutionary, fast and even fun. We use the best practices in the industry such as proper testing and collaboration. Most importantly we want our customers to be happy with our services and utilize our strengths in the arena of application development and website solutions to enhance their organizational efficiency.

Application Development

Designing and developing web and mobile applications require ample technical expertise and great art of craftsmanship, however through the years, we have mastered this art of building robust and efficient applications by providing consistent and professional software development services. Our team realizes the complexity of software

development process and being in this business for years, we have identified the core challenges that vitally contribute such as understanding and analyzing client's requirement, application performance, usability and scalability, software development methodology, selection of technology and tools for each application that address the issue, adapting the best practices, application security, GUI (Graphical User Interface) prototyping and teamwork.

Our team has shown its quality in developing web applications for different platforms such as Java, .NET, PHP and Python and integrating a rich and useful set of tools. We have proven great expertise in developing secure and rich mobile applications for Android and iOS. We insure software quality by properly managing the processes such as design, coding, testing, modification management and stable releases.

Website Solutions

Today we believe, online presence through website tend to be one of the most crucial factors to any organization. Properly understanding this organizational need by website solution providers requires a set of expertise and experience to tailor the solution to meet the need. However, since the foundation of LEMA Network, we have provided website solutions to various organizations and we acquired the required expertise.

Whether the client needs website or hosts or registers the domain, we kickoff with engineering client's requirements through close coordination. In the next stage we propose a solution that guarantees client's requirements are well met.

Our systematic approach to undertake website services is quite different from that of our competitors' and delivers best and quick results that ensures minimal requirements such as great look and feel, best performance, easy-to navigate, thorough testing prior to launch, scalable system and secure website. We offer following broadly categorized solutions:

- Website design and development
- Website maintenance and redesign
- Web, email and server hosting and domain registration

Eagle Eye Tracking Solutions

LEMA Network provides a complete set of tracking solution. You can track your vehicles, personnel and assets in real-time by using our Eagle Eye Solution which integrates state of the art and cutting edge tracking technology. With our small, lightweight and handheld Personnel Tracker you can live-track your personnel, whether it is truck, van or any other type of vehicle, you can live-track them with our Vehicle Tracker and easily track your assets with our small and long-lasting self-battery powered Asset Tracker. The solution also provides rich add-on such as door sensors, engine ignition controller, panic button and such more. All devices transmit records (GPS coordinates and other states) to the server via GPRS and SMS and can also track and store in offline mode for many hours. Once the device is active and functional on any individual, vehicle or asset, you can keep an eye on them via a user-friendly and easy-to-manage web or desktop interface which requires internet accessibility otherwise easily check their status and location by sending an SMS to the active device through your mobile phone. The solution offers robustness that has been tested in harsh environments of Afghanistan.

Network Solutions

Our network design and implementation include vast array of services such as on-site surveys, material cost and quantity estimation, professional physical and logical network structure design using latest design software, fast and secure implementation undertaken by network professionals, final testing and troubleshooting and handover of the project. Above services include both wired and wireless technologies
